Sports Data Soccer API - Rankings Feed (PE4)

Get rankings data for all players, teams and games in a range of statistical categories within a tournament calendar (season).

Overview

The Soccer **Rankings feed** provides data which ranks all matches, teams and players in a range of statistical categories within a season of a competition (tournament calendar). You can see complete lists of match stats, team stats and player stats in the guide.

Required Compliance:

To comply with our API security and best practice logic for your API calls please refer to our **FAQs**. We also recommend that you take a look at our **API Overview and Authentication Guide**. You will learn the basics of how our API works and key concepts to get started.

How Often Should I Poll The Feed?

We have provided some guidelines to help ensure that you call the feed only as often as you need to. Make sure that you don't exceed the rate confirmed with us - this can vary depending on whether you make requests as a B2B or B2C outlet - if you need more information on this, contact your Stats Perform representative.

UPDATED	POLLING FREQUENCY							
	TIER 15	TIER 12+14	TIER 4	TIER 11+13	TIER 8+9+10	TIER 6+7	TIER 5	TIER 1+2+3
Updated once a day at the end of the given match day	See Tier 13	Post-match tiers but information for Tier 13 applies	n/a	Once a day at the end of the given match day			n/a	n/a

Rankings (PE4) Guide

USAGE	FEED
GET rankings data for the specified tournament calendar UUID. <i>Required:</i> Tournament Calendar UUID. See the query parameters table below.	/soccerdata/rankings/{outletAuthKey}{restC

If your request URL is as follows (does not contain a tournament calendar UUID), the feed returns an error:
/soccerdata/rankings/{outletAuthKey}

Query Parameters And Example Request Parameters

This feed makes use of the **Global query parameters** and you can use the following query parameters. You can only pass one ID to each parameter - it does not support a comma-separated list of IDs. You must query the **/rankings** feed by a specific tournament calendar UUID. See also: **Using Query Parameters** and **Global query parameters** for a guide.

Legacy IDs: You can use the **tmc1** parameter to filter by legacy IDs.

How to use query parameters and make successful requests:
In our guides, we use HTTPS syntax for our example **GET** requests (rather than cURL, for example). All URLs are case-sensitive - this means that URL strings must contain the correct case and operators. You **MUST** format your requests correctly and include certain information; otherwise, an error will be returned. You can find information about the API, including the base URL ({protocol}://{requestDomain}/{feedResource}), in the **main guide** and **API Overview and Authorisation guide**.

- Include the following information in the URL or header and make sure it is correct for your outlet: your unique and valid {outletAuthKey} this must be after the Outlet Authentication Key (and endpoint, if applicable). for **_rt={mode}** (operating mode) and **_fmt={dataFormat}** (response format), entity query parameter and UUID.
- Begin the query parameter string with **?** (question mark) - this must be after the Outlet Authentication Key (and endpoint, if applicable). To build up a query string, make sure that each query parameter is separated by the **&** (ampersand) operator. Values must be separated by the correct operator, for example **&** (multiple values, 'AND'), or - if a parameter supports it - **,** (multiple values, 'OR') or **!** ('NOT').
- Use the required **_** (underscore) for any parameters listed with this prefix.
- Remove any placeholder value curly braces **{ }** from your calls (we include these as an example only).
- If using the JSONP format (**_fmt=jsonp**) you **MUST** use it in combination with the callback parameter (**_clbk**) and a fixed value (or where you use a different value in a different instance, you must do this as little as possible). Be aware that common JavaScript frameworks, such as jQuery, can default to use randomly-generated function names - you must make sure that these are overridden and define a fixed function name instead.

Query parameter	Value and description
{tournamentCalendarUuid} Tournament Calendar UUID	GET rankings data for the specified tournament calendar (path parameter method) . Pass the tournament calendar UUID in the request URL directly as the {assetId} (asset/resource ID). GET https://api.performfeeds.com/soccerdata/rankings/{outletAuthKey}/{tournamentCalendarUuid}?_rt={mode}&_fmt={dataFormat}

Query parameter	Value and description
tmc1	GET rankings data for the specified tournament calendar (query parameter method). Pass the tournament calendar UUID to the tmc1 parameter. GET https://api.performfeeds.com/soccerdata/rankings/{outletAuthKey}?_rt={mode}&_fmt={dataFormat}&tmc1={tournamentCalendarUuid}
tmc1+live	GET live rankings data for the tournament calendar (UUID). Pass the tournament calendar UUID to the tmc1 parameter and a parameter value of live=yes. Note: This parameter will only produce data for a few competitions. GET https://api.performfeeds.com/soccerdata/rankings/{outletAuthKey}?_rt={mode}&_fmt={dataFormat}&tmc1={tournamentCalendarUuid}&live=yes

Sample Calls

These sample calls let you see an example URL and the response - click on the links below (hyperlinks open in a new window).

- **XML** - uses assetId/resourceId (path parameter method)
- **JSON** (uses **tmc1** query parameter method)

Example Response

The feed response will contain a large number of elements for each individual match (**<matchData>**), team (**<team>**), and player (**<player>**), nested in **team**) in the **seasonRankings** for a tournament calendar and competition.

Click on the button below to see complete example of a response from the feed.

Statistic Types

The statistics for the given season/tournament calendar are split into the following elements (where available):

- `matchData` (a match in a season/tournament calendar)
- `team` (a contestant in a season/tournament calendar)
- `player` (a player in a team/contestant, in the given season/tournament calendar)

Within these elements, each statistic is shown as a `stat` and its type and value will appear under it, if it is available. The statistics are delivered under the `stat` object (as an array in JSON). Click on the buttons below to see the complete lists of match, team (contestant), and player statistics.

Match Stats

The individual `matchData` elements represent each match in the given season/tournament calendar. Each element contains the unique ID (UUID) for the match, its statistics (under the `stat` object), and the unique ID of each contestant in the match (under the `teamData` sub-elements).
